Welcome Message

We are delighted to welcome you to the **23rd Congress of the International Association of Rural Health and Medicine (IARM),** to be held in Beijing, China, from 16 to 18 September 2026.

The Congress is hosted by the International Association of Rural Health and Medicine (IARM) and organized by the School of Population Medicine and Public Health, Peking Union Medical College (PUMC), in collaboration with the National Center for Occupational Safety and Health (NCOSH) of the National Health Commission of the People's Republic of China.

Under the theme **"Holistic Health for Rural Populations: Tackling Global Challenges"**, the Congress serves as an international forum for knowledge-sharing, experience exchange and discussion of innovative approaches to advance rural health and medicine. The scientific programme comprises keynote lectures, thematic sessions, oral presentations, poster exhibitions, field visits and panel discussions covering major ongoing and emerging issues affecting rural populations worldwide.

Selected sessions will also be streamed online for participants unable to attend in-person.

This congress continues the long-term international cooperation tradition of IARM. Beijing previously hosted the 11th International Rural Medicine Conference in 1991, gathering more than 400 specialists from nearly 30 countries. We are honoured to welcome the global rural-health community back to Beijing.

Major airports, railway stations and the Beijing subway system provide signs and announcements in both Chinese and English. Ticket machines and other transport facilities also generally provide an English-language option.

Navigation apps

For navigation, we strongly recommend downloading **Amap Global (also known as Gaode Maps / 高德地图)** before departure. Amap is one of China's main mapping and navigation applications and now provides multilingual support, including English, for international visitors. It is a much more reliable choice than Google Maps for navigation within mainland China and provides walking, driving and public-transport directions as well as detailed information on subway stations and exits.

Before departure, it is advisable to install Amap and save the conference venue, hotel and other important destinations. Keep the hotel and conference addresses both in English and in Chinese. Screenshots of the Chinese addresses are also useful when communicating with taxi drivers or asking for assistance.

Practical Notes for Delegates

Payments in China

The easiest solution is to install and configure one of the two main Chinese payment applications before travelling: **Alipay or WeChat / WeChat Pay**.

Both systems can be linked to eligible international credit or debit cards and are accepted extremely widely in China, including in many small shops and by street vendors. Payment is normally made by **scanning a QR code** or **allowing the merchant to scan your personal payment QR code**.

We strongly recommend installing Alipay or WeChat before departure, registering your account and linking your international payment card in advance. It is also advisable to inform your bank that you will be travelling to China and to make sure that your card is authorised for international and online transactions.

Mobile phone and Internet connection

Having a working mobile Internet connection immediately upon arrival is particularly important in China. Your mobile phone will be used not only for communication but also for payments, maps, transportation and many everyday activities. Alipay and WeChat Pay in particular require an Internet connection.

Your normal mobile subscription may work in China through international roaming, but this can be expensive and should be checked with your provider before travelling. For a short visit, one of the simplest solutions is to purchase a **travel eSIM** before departure. Providers commonly used by international travellers include Airalo, Holafly and Nomad. Short-duration packages are available and are convenient for a conference visit.

We strongly recommend purchasing and installing the eSIM before leaving your home country, while you still have a reliable Internet connection. Follow the provider's activation instructions carefully. Please also check before purchasing that your smartphone supports eSIM technology.

A travel eSIM is often data-only. It can therefore be useful to keep your normal SIM active if you need to receive SMS verification codes, particularly from your bank. To avoid unexpected roaming charges, mobile data roaming on your home SIM should normally be disabled.

Internet services apps

Participants should be aware that Internet access in mainland China differs from that in Europe or North America. Many commonly used Western online services may be unavailable or may not work normally on a standard mainland Chinese Internet connection. In particular, Google services (including Google Maps and Gmail) and WhatsApp should not be relied upon. Access to some Microsoft/Outlook services can also vary depending on the service and network. For this reason, essential travel information should not be stored only in services that you may be unable to access after arrival.

A recommended setup before departure

- Install **Alipay** and/or **WeChat**.
- Register your account and link an international credit or debit card.
- Purchase and install a **China-compatible travel eSIM**.
- Install **Amap (Gaode Maps / 高德地图)** and save the hotel and conference venue.
- Keep your normal SIM available for receiving SMS verification codes, if necessary.
- Check that international transactions are enabled on your credit/debit card.
- Save the hotel and conference venue addresses both in English and Chinese, and keep screenshots on your phone.
- Do not rely exclusively on Google, Gmail, WhatsApp or other services that may be unavailable on a standard mainland Chinese network.

One final recommendation

Do not wait until you arrive in Beijing to organise your mobile connection, payment apps and navigation app. Having a functioning data connection, Amap and at least one properly configured mobile payment system from the moment you arrive will make transportation, purchases and everyday activities considerably easier.
